

Is there Consistency between Self-Esteem, Identification, and Evaluation of Aggression?

Kevin L. Nunes, Chantal A. Hermann, and Mandie E. Woods

 **In K. L. Nunes (Chair), *A closer look at criminal attitudes.* Symposium conducted at the 2nd North American Correctional and Criminal Justice Psychology Conference, Toronto, Ontario.**

Consistency between Self-Esteem, Identification as Violent, and Attitude to Violence

Consistent			Inconsistent		
Self	Identification	Violence	Self	Identification	Violence
+	Violent	+	+	Violent	-
+	Nonviolent	-	+	Nonviolent	+
-	Violent	-	-	Violent	+
-	Nonviolent	+	-	Nonviolent	-

Research Questions

1. Is there consistency between self-esteem, identification, and attitude towards violence?
2. Is the interaction of these constructs associated with violent behaviour?

Measures

- Attitude towards violence
 - e.g., violence is very negative (1) vs. very positive (7)
- Self-esteem
 - e.g., I am very negative (1) vs. very positive (7)
- Identification as violent
 - e.g., I am very peaceful (1) vs. very violent (7)
- Violent Behaviour Scale (VBS)
 - e.g., How many times have you started a physical fight with someone? Never (0) vs. 9 times or more (9)

Research Question #1

- Is there consistency between self-esteem, identification, and attitude towards violence?

Participants

- 327 undergraduate students above median (2+) on self-reported past violent behaviour (VBS)
- 31% men, 67% women, and 2% did not report gender
- Median age 18-19 years old

Descriptives and Intercorrelations
(*N* = 327)

	1	2	<i>M</i>	<i>SD</i>
1. Attitude to violence			1.93	0.85
2. Self-esteem	-.13*		5.62	0.73
3. ID as violent	.36*	-.45*	2.96	1.13

* *p* < .05

Predicting Identification of Self as Violent from Attitude towards Violence and Self-Esteem

Predictor	Partial <i>r</i>
Attitude to violence*	.34
Self-esteem*	-.45
Attitude X Self-esteem*	.12

* *p* < .05

Predicting Self-Esteem from Attitude towards Violence and Identification of Self as Violent

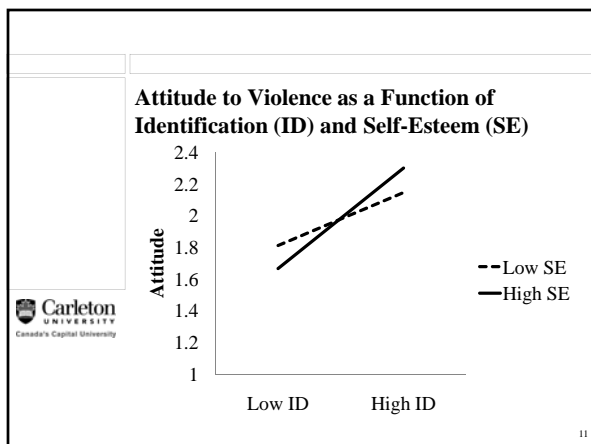

Predictor	Partial <i>r</i>
Attitude to violence	.00
Identification as violent*	-.46
Attitude X Identification*	.16

* *p* < .05

Predicting Attitude towards Violence from Self-Esteem and Identification of Self as Violent

Predictor	Partial <i>r</i>
Self-esteem	.00
Identification as violent*	.35
Self-esteem X Identification*	.15

* *p* < .05

- Results**
- 2-way interactions suggest some consistency between self-esteem, identification, and attitude towards violence
 - The relationship between ID and attitude was stronger for participants with higher self-esteem than those with lower self-esteem

Research Question #2

- Is the interaction of self-esteem, identification, and attitude towards violence associated with violent behaviour?

 Carleton UNIVERSITY
Canada's Capital University

13

Participants

- 654 undergraduate students (including those with or without past violent behaviour)
- 24.3% men, 73.9% women, and 1.8% did not report gender
- Median age 18-19 years old

 Carleton UNIVERSITY
Canada's Capital University

14

Descriptives and Intercorrelations (N = 654)

	1	2	3	M	SD
1. Attitude to violence				1.69	0.80
2. Self-esteem	-.29*			5.77	0.74
3. ID as violent	.46*	-.51*		2.54	1.10
4. VBS	.37*	-.18*	.45*	4.95	6.50

* $p < .05$

 Carleton UNIVERSITY
Canada's Capital University

15

Predicting Violent Behaviour from Attitude, Self-Esteem, and Identification

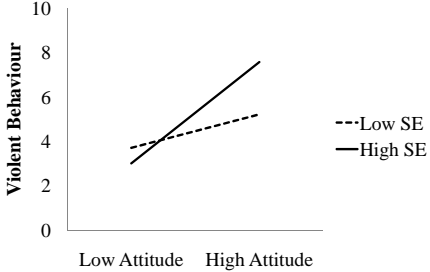

Predictor	Partial <i>r</i>
Attitude*	.21
Self-esteem	.06
Identification*	.30
Attitude X Self-esteem*	.10
Attitude X Identification	.04
Self-esteem X Identification	-.07
Attitude X Self-esteem X Identification	.01

* $p < .05$

 Carleton UNIVERSITY

16

Violent Behaviour as a Function of Attitude to Violence and Self-Esteem (SE)

Violent Behaviour

Low Attitude High Attitude

--- Low SE
— High SE

 Carleton UNIVERSITY
Canada's Capital University

17

Results

- Contrary to expectations, 3-way interaction of self-esteem, identification, and attitude towards violence was not significantly associated with violent behaviour

 Carleton UNIVERSITY
Canada's Capital University

18

• However, 2-way interaction of self-esteem and attitude was significant

• The relationship between attitude and behaviour was stronger for participants with higher self-esteem than those with lower self-esteem

19

Limitations

- Self-report
- Student sample
- Polarization towards negative attitude to violence, high self-esteem, and non-identification as violent
- Small effects

20

Conclusion

- In spite of limitations, these findings suggest that considering self-esteem, identification as violent, and attitude towards violence in combination may advance our understanding of aggression

21

Combinations Consonant with Violent Behaviour?

Self-esteem	Identification	Attitude to violence
+	Violent	+
+	Nonviolent	-
-	Violent	-
-	Nonviolent	+
