## Current Research Interests

Broadly, I have two independent lines of research:

1. Conflict Resolution: In this line of research, we examine the causes and consequences of harmdoing at both the interpersonal (one person transgressing against another) and intergroup level (historical and contemporary harm experienced by members of one group at the hands of another group). Of particular concern is the emotional reaction that stems from harming or being harmed (e.g., angst, guilt) and their effects on relations with others. For example, we have shown that collective angst (i.e., concern for the future viability of own's group) is as a strong motivator of group-based protective behaviour. This behaviour can either be constructive (e.g., donating time and money to your group) or destructive (e.g., support for aggression toward other groups). Ultimately, this research is aimed at advancing peace and reconciliation. As such, we also focus attention on the apology-forgiveness link and ways to make this link stronger.

2. Disordered Gambling: In this line of research, we examine factors that lead to excessive play (e.g., erroneous cognitions, craving) and means to increase responsible gambling (e.g., setting a limit on play). Recently, attention has been paid to the potential impact social casino gaming (i.e., free-to-play games on social network sites) and loyalty program membership can have on (responsible) gambling behaviour. We also conduct a great deal of research on how to help people who live with addiction overcome barriers to behavioural change. Primarily, this work focuses on the utility of nostalgic reverie for the pre-addicted self as a motivator for change.
