

CAN-SBX

STRATOSPHERIC BALLOON EXPERIMENT

Send Your Experiment to the Stratosphere!

The Canadian Stratospheric Balloon Experiment Design Challenge (CAN-SBX) is your chance to fly a payload up to 30 km into the stratosphere to conduct research or test your design! CAN-SBX challenges your team to design, build, launch, and operate your payload in collaboration with the Canadian Space Agency, and learn about high altitude research!

Any student team at a Canadian university or college can submit a proposal for their experiment! Teams will be selected to fully design, build and fly their experiments on board a stratospheric balloon to the edge of space!

Deadline to apply: Nov. 14th 2021, 11:59 PM (ET)

For more information and the application process, visit seds.ca/can-sbx. For any questions, please contact us at cansbx@seds.ca.
