MEET NEW FACES

HERPETOLOGY - BIOL4502

Fall 2020

We will take a deep look at the natural history, ecology, physiology, behavior, and conservation of reptiles and amphibians. The course will revolve around weekly lectures and assignments accompanied by live online discussions. We will work together on the analysis of real herpetological data sets and on science communication projects. Through these activities, you will hone your analytical and communication skills while learning about the fascinating biology of herps.

This course is relevant to those interested in careers in conservation, consulting, and education as well as those considering graduate work in ecology, evolution, and conservation.

Prerequisite: BIOL2001

Instructor: Grégory Bulté (gregory.bulte@carleton.ca)
