Adrian J. Soble BPRC Summer Seminars June 27th 2019

Overview

- 1. Hello!
- 2. Looking Back
- 3. Recent Lessons Learned
- 4. Intro to Grasshopper
 - Work Looking Forward

Carleton Heritage Conservation Symposium April 27th 2019

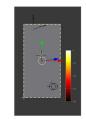

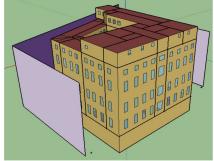

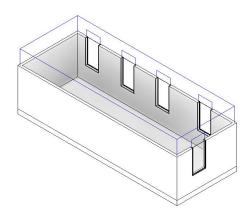

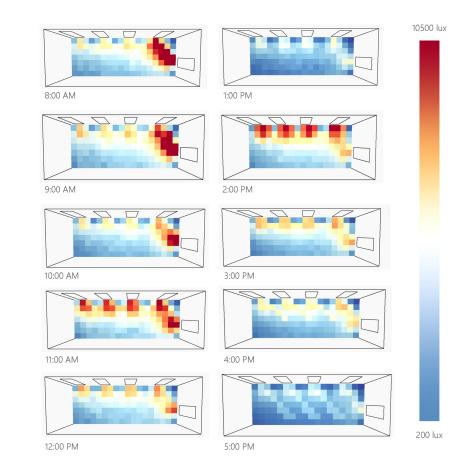

IBPSA Rome 2019 Student Modeling Competition

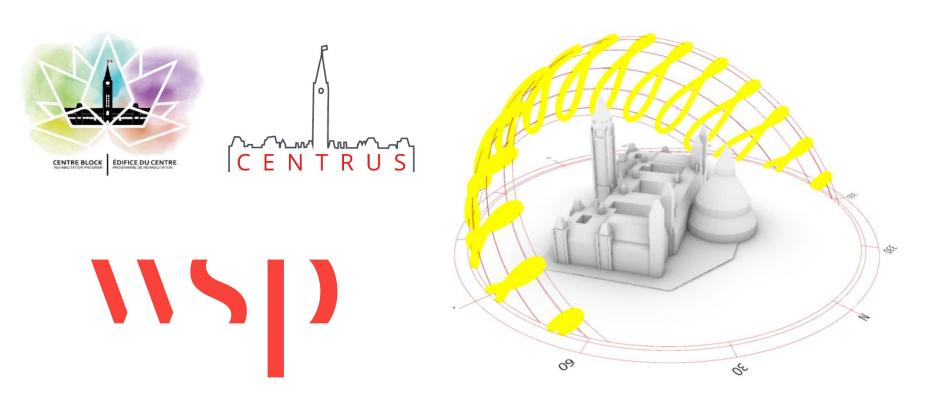

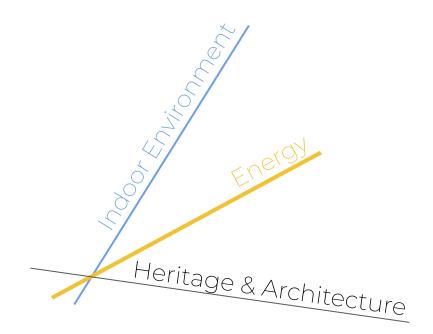

Mexico DSA 2019

Looking Back: Research Objectives

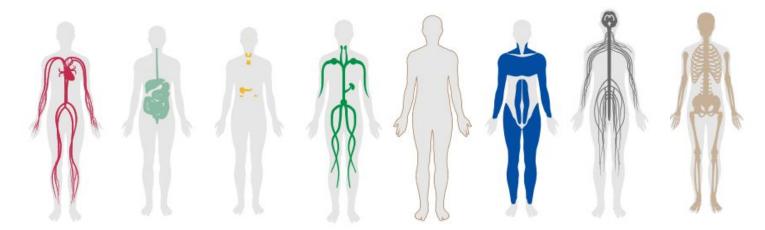

Develop tools and methodology to better incorporate existing/historical building **performance** aspects into the decision making process for retrofits by means of **generative design**

Looking Back: Indoor Environmental Quality

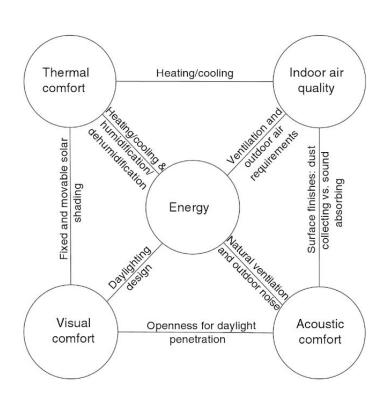

People spend up to 95% of their time indoors

Designers should keep the best interest of the public in mind

Looking Back: Building Energy

Buildings are responsible for 30 - 45% of the global energy usage via systems that support:

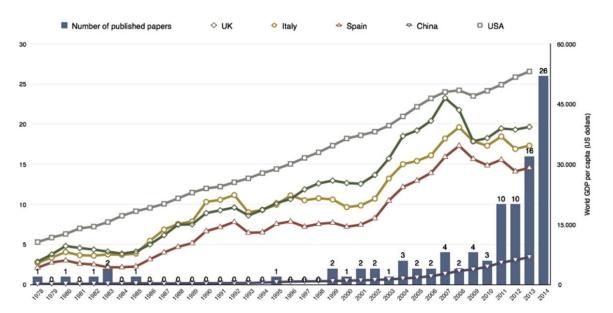

- Heating
- Ventilation
- Lighting
- Appliances
- Electronics
- Hot Water

Looking Back: Heritage and Existing Buildings

Heritage buildings comprise of 10 - 15% of the building stock

The rate of replacement for existing buildings is only 1-3% annually

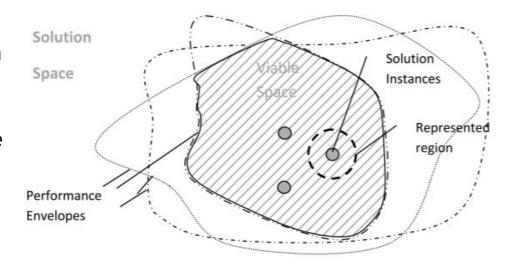

IEQ Category	Metric Name
LIGHT	Average light intensity Work surface lighting intensity View access distance Spatial daylight autonomy Annual sunlight exposure Useful Daylight Illuminance
Acoustic COMFORT	 Exterior Noise Intrusion Perceived Noise Criteria Reverberation Time Sound Transmission Class Speech Transmission Index
AIR	· Formaldehyde · TVOC · CO · PM _{2.5} · PM ₁₀ · Ozone · Radon · CO ₂ · RH · Odor
COMFORT	Predicted Mean Vote Predicted Percent Satisfied

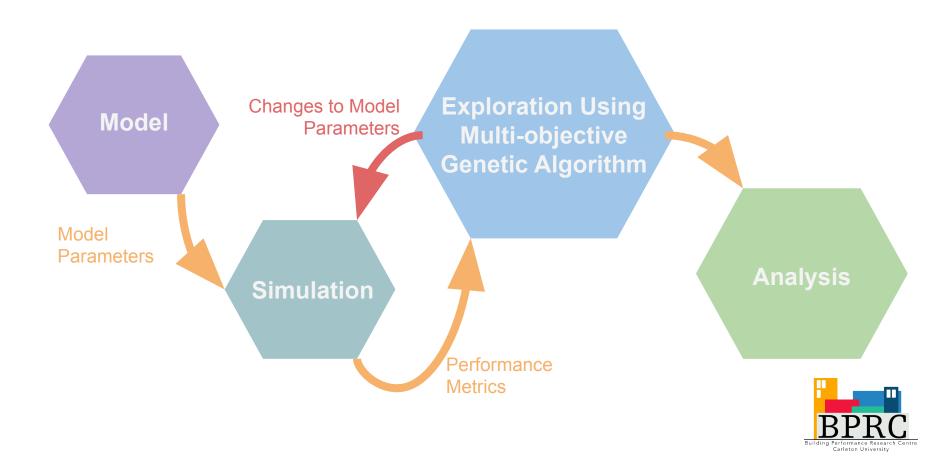

Looking Back: What is Generative Design?

- More than parametric analysis
- Uses evolutionary optimization algorithms
- Compromise Oriented
 - Not intended to find single "Most Optimal" solution
- Design options must be formatted for stakeholder evaluation

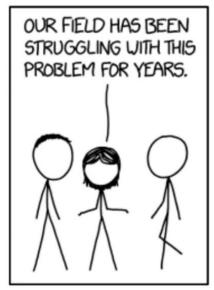

Looking Back: GD Methodology

Be the chef, not the farmer*

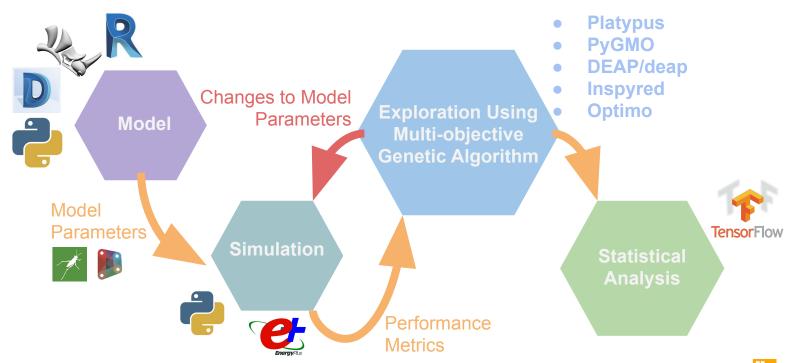

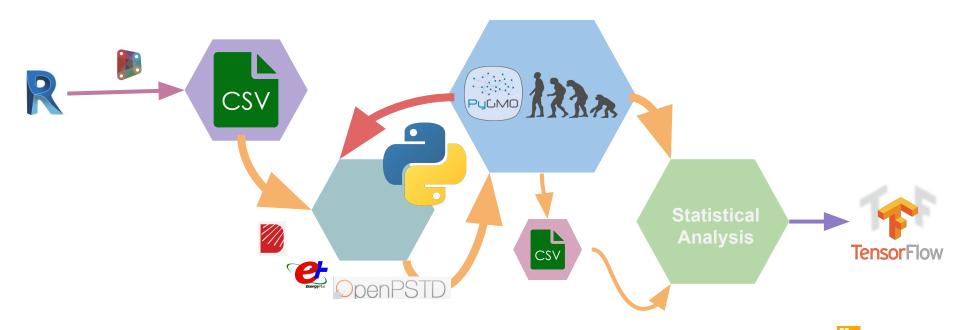

Looking Back: Tool Review

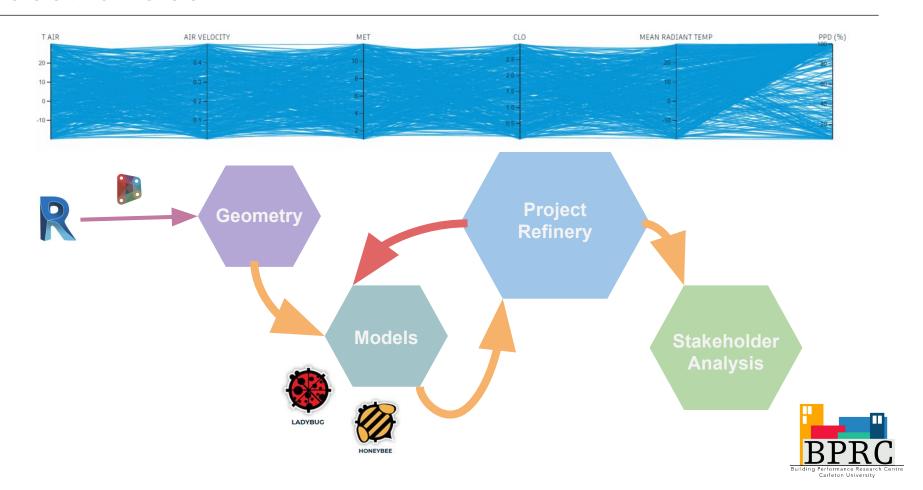

First Idea

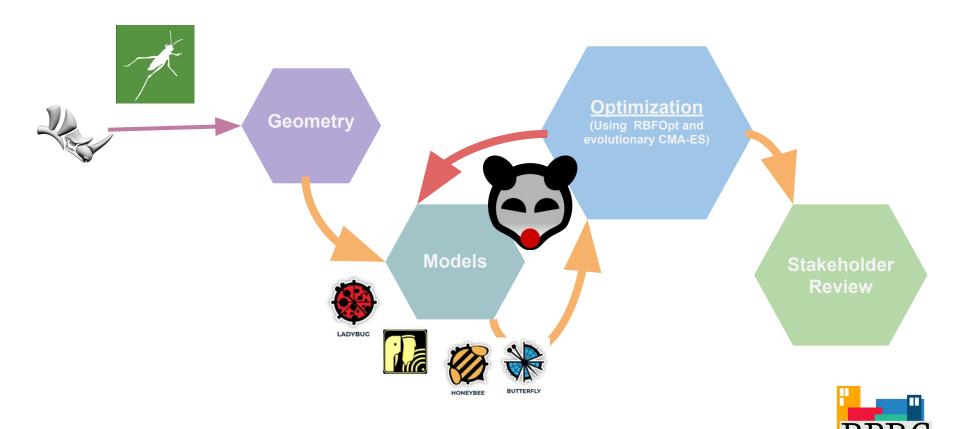

Second Idea

Current Idea

Why did I move away from Dynamo?

Visual Programming Comparison

	D	
Interfaces with	R	
First Released	2013	2007
Open Source Back End	Yes	Yes
Python Interface	Yes	Yes, More Stable
Imports Geometry	Yes	Yes
Imports BIM Features	Yes	No
Apps / Plugins	1176	728, Tighter Control

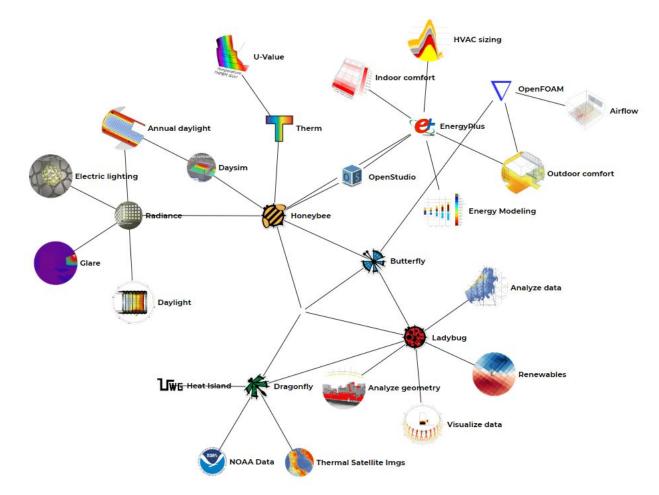

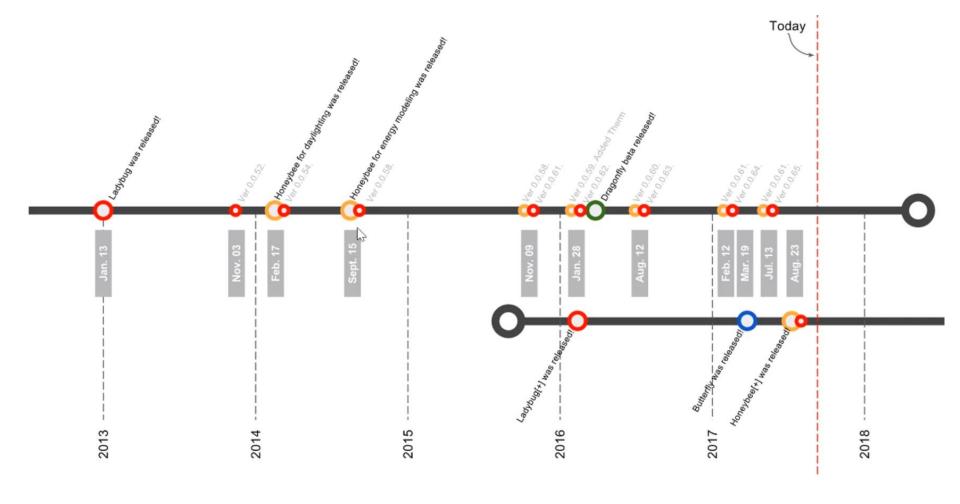

LINK

We should all be using / teaching grasshopper?

 Comfortable and interactive front end to already verified simulation engines

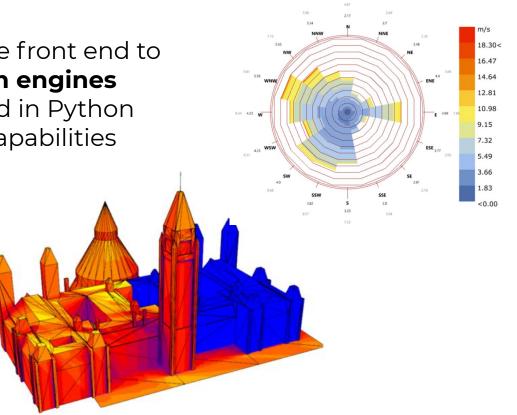

Open source and developed in Python

Robust data visualization capabilities

Very flexible

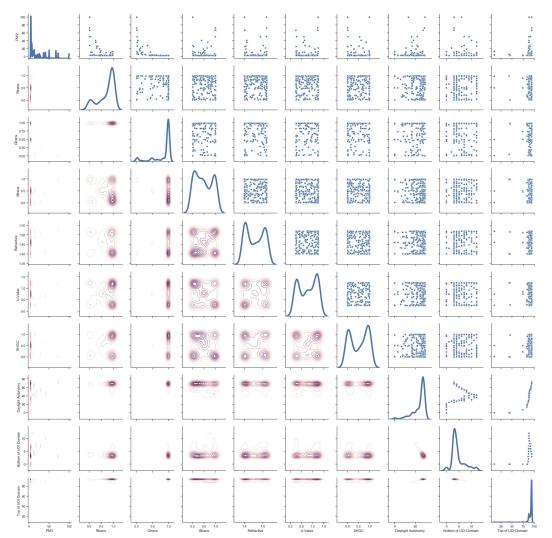

Extensive documentation

Industry is using it!

Let's Dive into Grasshopper!

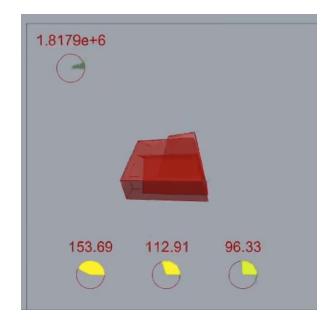

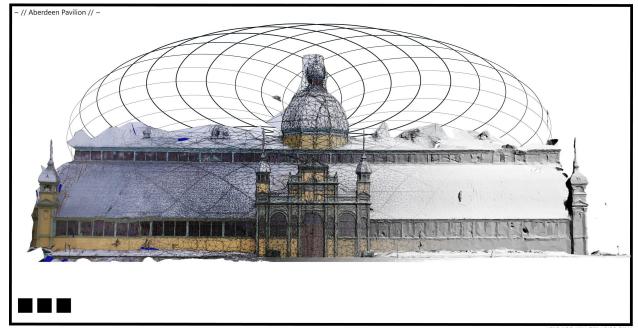

Looking Forward

- More optimization runs
- Develop balanced cost function for:
 - Light Comfort
 - Energy Efficiency
 - Thermal Comfort
 - Air Quality
- Figure out how to speed up run times
- Explore the potential for Acoustic Comfort modeling
- Develop other ways to navigate / communicate large volumes of options to stakeholders

45°24'00.1"N 75°40'58.8"W

Thank You

Adrian John Soble | adriansoble@cmail.carleton.ca
