

## ELEC5100: Introduction to Engineering Education Research

### Introduction

Engineering education research is a relatively new but growing discipline of research. Its focus is on the study and research of the learning around engineering, in particular (but not restricted to) the education of engineering student in universities. Topics within the course include, theoretical background information on learning; case studies on particular learning situations: including laboratories and project work; social and professional aspects of engineering education; plus related research methods. Besides engineering the field brings in research into learning, psychology and social sciences.

### Course Description and Requirements

**Course Description:** Engineering education research is focused on the study and understanding of the learning of engineering, particularly the education of engineering students. Topics include: theoretical background (learning taxonomies, models and frameworks), case studies: including laboratories and project work, social and professional aspects of engineering education, related research methods.

### Instructor

**Professor:** Alan Steele

**Email:** [alan.steele@carleton.ca](mailto:alan.steele@carleton.ca)

**Course Webpage:** on Brightspace

**Delivery:** In-person

**Meeting time:** 1:05 pm - 2:25 am Monday & Wednesday, 9th Sept. 2026 - 11th Dec. 2026 (in Mackenzie Building 4342)

### Office Hours

I will be available for office hours at **2:30pm to 4pm Wednesday (room ME4144)**. This could be adjusted if we see it beneficial to change this. If you need to meet at an alternative time then please contact me for an appointment. An online Zoom meeting is possible too, email me to arrange such a meeting.

### Textbook:

**Students are not required to purchase textbooks or other learning materials for this course.**

There is no set text that you have to buy but there will be references made to various books and papers. Wherever possible I will try and select material that is available electronically through Carleton's Library website or is openly available. As this course looks at an active area of research and there is a project required

then there will be a significant amount of searching in the literature by you. Again, the University's Library website will allow access to many sources of information.

Two resources that are worth noting are:

- "Cambridge Handbook of Engineering Education Research", A. Johri and B. Olds (eds.), Cambridge University Press, (2014).
- "Experiential Learning in Engineering Education", Alan L. Steele, CRC Press, (2023).

These are available through the library.

## Learning Outcomes

Upon successful completion of this course, students will be able to:

- Explain and discuss different aspects of the theoretical background to engineering education
- Apply the theoretical ideas and reflect on to their own engineering education experience.
- Conduct an examination of current engineering education research in an area of the student's interest, via a small project. This includes:
  - Analyze recent literature. Compare and discuss ideas of approaches.
  - Presenting their key findings of their own investigation.
  - Create a report with an evaluation and reflection on the findings.

## Lecture Outline

This is an approximate schedule, there may be slight adjustments in times or topic content.

| Week | Week Starting | Topic                                                                          | Details                                                                                                                                                                                                                       |
|------|---------------|--------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0    | 7th Sept      | Introduction to engineering education                                          | Introduction to the course and the research area of engineering.                                                                                                                                                              |
| 1    | 14th Sept     | Taxonomies                                                                     | What is a taxonomy and why use one. Types of taxonomy. Bloom, Anderson, SOLO, Fink                                                                                                                                            |
| 2    | 21st Sept     | Learning models and learning styles                                            | Kolb, Felder and Silverman, Schön. Learning approaches; surface, deep and strategic.                                                                                                                                          |
| 3    | 28th Sept     | Theoretical frameworks for learning                                            | Frameworks include: Behaviourist, Cognitivist and Situated. Understanding the perspectives in reported studies.                                                                                                               |
| 4    | 5th Oct       | Examples of engineering education. Preparation for case studies                | A series of case studies will be investigated by students and presented in the class (in addition to their own mini-project). Reports can be from observation in the class, an analysis of a paper or a combination of those. |
| 5    | 12th Oct      | Scholarship of Teaching and Learning (SOTL) and Engineering Education Research | What is SOTL and how does it fit with engineering education research? Human ethics for research.                                                                                                                              |

|    |          |                                                                        |                                                                                                                                                                                           |
|----|----------|------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6  | 19th Oct | Case studies: Classrooms                                               | Examples could be: looking at peer instruction; development of classroom instruction in the age of mobile devices; online 'classrooms'; problem analysis sessions. co-operative learning. |
|    | 26th Oct | No classes. Fall break.                                                |                                                                                                                                                                                           |
| 7  | 2nd Nov  | Case Studies: Laboratories                                             | Examples could be: Types of laboratory experience; benefits of individual to group laboratories; the laboratory environment; remote access and virtual laboratories.                      |
| 8  | 9th Nov  | Case Studies: Project work                                             | Examples could be: capstone projects; first year projects; mini-projects within a course; group project issues and concerns; evaluation.                                                  |
| 9  | 16th Nov | Case Studies: Social and professional aspects of engineering education | Ethical issues; Indigenous aspects; accreditation; diversity.                                                                                                                             |
| 10 | 23rd Nov | Assessment                                                             | Consideration of the area of assessment.                                                                                                                                                  |
| 11 | 30th Nov | Student presentations and discussion                                   | Mini-projects would have been decided by week 6. This is either oral or poster demonstration of the findings.                                                                             |
| 12 | 7th Dec  | Future areas of developments and summary.                              | Selection of some current and potential future direction in engineering education. Summary of the course.                                                                                 |

## Assessment

The set and due dates are approximate and may vary depending on factors like progress and workload. (The week number relate to the schedule above, so week 1 starts 8th Sept and there is a week 0).

- Assignment 1: Value 10% [Set week 1. Due week 3]
- Assignment 2: Theory 15% [Set week 4. Due week 6]
- Participation in Discussions 15% [Set week 1. Evidence collection due week 12]
- Project 60% (composed of the elements below)
  - Proposal (15%) [Set week 6. Due week 7]
  - Update reflection (15%) [Set week 8. Due week 9]
  - Peer review of colleague's draft (15%) [Set week 9. Due week 10]
  - Video presentation (15%) [Set week 9. Due week 11. Presented week 12]
  - Final report (40%) [Due week 12]

## Self-Declaration form and Deferred Term work

Students who claim illness, injury or other extraordinary circumstances beyond their control as a reason for missed term work are held responsible for immediately informing the instructor concerned and for submitting a self-declaration form no later than three (3) days after the date/deadline of term work including test/midterm, labs, assignments. Any alternate arrangements made with the instructor for submission of term work should be made as soon as possible but within 3 days of the missed due date. If this is not possible after discussion with the instructor, alternate arrangements must be made before the last day of classes in the term as published in the academic schedule.

**Consult with the instructor no later than 3 days after any missed course work or midterm examination.**

## Important Dates in the Term

These **selected** dates are included here for convenience, and you should always check <https://calendar.carleton.ca/academicyear/> in case of any changes

- *7th September 2026*. Statutory holiday. University closed.
- *8th September 2026*. Academic orientation (undergraduate and graduate students).
  - Orientation for new Teaching Assistants.
  - All new students are expected to be on campus. Class and laboratory preparations, departmental introductions for students, and other academic preparation activities will be held.
- *9th September 2026*. Fall term begins. Full fall, early fall and fall/winter classes begin.
- *22nd September 2026*. Last day for registration and course changes (including auditing) in full fall, late fall, and fall/winter courses.
  - Graduate students who have not electronically submitted their final thesis copy to Graduate Studies will not be eligible to graduate in fall 2026 and must register for the fall 2025 term.
- *30th September 2026*. Last day to withdraw from full fall term and fall/winter courses with a full fee adjustment.
- *12th October 2026*. Statutory holiday. University closed.
- *26th-30th October 2026*. Fall break, no classes.
- *15th November 2026*. Last day to withdraw from full fall and late fall term courses.
  - Last day to request Formal Examination Accommodation Forms for December examinations to the Paul Menton Centre for Students with Disabilities. Note that it may not be possible to fulfil accommodation requests received after the specified deadlines.
- *30th November 2026*. Last day for receipt of applications from potential winter (February) graduates.
- *4th December 2026*. Last day for graduate students to submit their supervisor-approved thesis, in examinable form to the department.
- *11th December 2026*. Fall term ends.
  - Last day of full fall and late fall term classes.
  - Classes follow a Monday schedule.
  - Last day for take home examinations to be assigned, with the exception of those conforming to the examination regulations in the Academic Regulations of the University section of the Undergraduate Calendar/General Regulations of the Graduate Calendar.
  - Last day that can be specified by an instructor as a due date for term work for full and late fall courses.
- *12th-23rd December 2026*. Final examinations in full fall and late fall courses and mid-term examinations in fall/winter courses will be held. Examinations are normally held all seven days of the week.
- *24th December 2026 through 1st January 2027 inclusive*. University closed.

## Academic Integrity and Plagiarism

a) Please consult the Faculty of Engineering and Design information page about the Academic Integrity policy and our procedures: <https://carleton.ca/engineering-design/current-students/fed-academic-integrity>.

Violations of the Academic Integrity Policy will result in the assignment of a penalty such as reduced grades, the assignment of an F in a course, a suspension or, expulsion.

b) One of the main objectives of the Academic Integrity Policy is to ensure that the work you submit is your own. As a result, it is important to write your own solutions when studying and preparing with other students and to avoid plagiarism in your submissions. The University Academic Integrity Policy defines plagiarism as “presenting, whether intentionally or not, the ideas, expression of ideas or work of others as one’s own.” This includes reproducing or paraphrasing portions of someone else’s published or unpublished material, regardless of the source, and presenting these as one’s own without proper citation or reference to the original source.

Examples of violations of the policy include, but are not limited to:

- Any submission prepared in whole or in part, by someone else;
- Using another’s data or research findings without appropriate acknowledgment;
- Submitting a computer program developed in whole or in part by someone else, with or without modifications, as one’s own;
- Failing to acknowledge sources of information through the use of proper citations when using another’s work and/or failing to use quotations marks; and
- Unless explicitly permitted by the instructor in a specific course, the use of generative AI and similar tools to produce assessed content (such as text, code, equations, images, summaries, videos, etc.).

## Academic Accommodations

You may need special arrangements to meet your academic obligations during the term. For an accommodation request the processes are as follows:

**Pregnancy obligation:** Contact us with any requests for academic accommodation during the first two weeks of class, or as soon as possible after the need for accommodation is known to exist. For accommodation regarding a formally-scheduled final exam, you must complete the Pregnancy Accommodation Form ([click here](#)).

**Religious obligation:** Contact us with any requests for academic accommodation during the first two weeks of class, or as soon as possible after the need for accommodation is known to exist. For more details [click here](#).

**Academic Accommodations for Students with Disabilities:** The Paul Menton Centre for Students with Disabilities (PMC) provides services to students with Learning Disabilities (LD), psychiatric/mental health disabilities, Attention Deficit Hyperactivity Disorder (ADHD), Autism Spectrum Disorders (ASD), chronic medical conditions, and impairments in mobility, hearing, and vision. If you have a disability requiring academic accommodations in this course, please contact PMC at 613-520-6608 or [pmc@carleton.ca](mailto:pmc@carleton.ca) for a formal evaluation. If you are already registered with the PMC, contact your PMC coordinator to send us your Letter of Accommodation at the beginning of the term, and no later than two weeks before the first in-class scheduled test or exam requiring accommodation (if applicable). After requesting accommodation from PMC, contact us, if needed, to ensure that accommodation arrangements are made.

You should request your academic accommodations in the [Ventus Student Portal](#), for each course at the beginning of every term. For in-term tests or midterms, please request accommodations at least two (2) weeks before the first test or midterm.

Please consult the [PMC website](#) for the deadline to request accommodations for formally-scheduled exams (if applicable).

**Survivors of Sexual Violence:** As a community, Carleton University is committed to maintaining a positive learning, working and living environment where sexual violence will not be tolerated, and where survivors are supported through academic accommodations as per Carleton's Sexual Violence Policy. For more information about the services available at the university and to obtain information about sexual violence and/or support, visit: <https://carleton.ca/equity/sexual-assault-support-services>

**Accommodation for Student Activities:** Carleton University recognizes the substantial benefits, both to the individual student and for the university, that result from a student participating in activities beyond the classroom experience. Reasonable accommodation will be provided to students who compete or perform at the national or international level. Contact us with any requests for academic accommodation during the first two weeks of class, or as soon as possible after the need for accommodation is known to exist:

<https://carleton.ca/senate/wp-content/uploads/Accommodation-for-Student-Activities-1.pdf>

### Generative Artificial Intelligence (AI) and related technologies

As a graduate course in engineering education AI tools are of interest to us from both the 'engineering' and the 'education' perspectives. So, I am proposing that AI tools will not be banned from use in this course, but I do want to allow only a limited use of them to provide the maximum opportunity to engage with the material and the ideas within this course. For most of you, the theoretical aspects and some of the research methods of the course will be new and so effective consideration and engagement with the material is important.

#### AI use in this course

Here are some guidelines for using AI in this course. *Do not consider any of this as a requirement that you must use or explore AI tools for this course.*

- You may use AI tools for basic word processing and formatting, such as for grammar and spell checking. However, not for text generation for use inclusion in assessed work. Put another way, you can use AI tools to improve *your* writing but cannot use AI tools to produce writing that you copy.
- As this course deals with a research area with many years of published work, the limited use of AI tools for brainstorming or investigating the literature is permissible. This use must be explained in any submitted work (see later).
- Early on in the course we will collectively have a discussion on the use of AI tools in engineering education and in the course. Out of this we may produce further recommendations and guidelines. As the course instructor I reserve the right for final approval on such guidelines.
- If you are thinking of using new or existing AI tools and in doubt how to appropriately use them, then do discuss with me prior to using. In short, I want to see in this graduate course appropriate learning.

Assessments are to show your own learning and understanding. Passing off an AI tool's output as your own is not showing your learning.

- When reviewing another course member's work do not upload the text (full or part) to an AI tool for assessment or analysis.

As our understanding of the uses of AI and its relationship to student work and academic integrity continue to evolve, students are required to discuss their use of AI in any circumstance not described here with the course instructor to ensure it supports the learning goals for the course.

### **Documenting the use of AI**

In each submitted piece of work there needs to be towards the beginning a sub-titled and clear statement of your AI use. This is to be included even if no AI was used. Within this provide clear and succinct details of how AI was used in the work leading to the submitted piece of work. Include the name of the tool use too.

For generally citing generative AI, please see the Library's guidelines

<https://library.carleton.ca/guides/help/generative-ai-chatgpt-and-citations>

### **Why have I adopted this policy?**

The aim of this limited use of AI within the course is to encourage your individual engagement and consideration of the range of material in the course. As well to allow your development of your critical evaluation and analysis of ideas, as well as developing your communication skills, including your own written 'voice', without the over reliance of AI tools.

In both engineering and education we are at an interesting moment with AI and I want to use this course as a venue to appropriately, discuss and potentially explore this area, within the subject focus of this course.

As our understanding of the uses of AI and its relationship to student work and academic integrity continue to evolve, students are required to discuss their use of AI in any circumstance not described here with the course instructor to ensure it supports the learning goals for the course.
