

IPE Seminar Series

Climate Change Scenarios and Carbon Tax Policies for the Global Economy!

Friday, October 2nd

1:00-3:00 pm

Dunton Tower
Rm 1524

Dr. Hashmat Khan

Dr. Khan is a macroeconomist studying boom-bust cycles, inflation, and monetary policy. His recent work addresses urgent global challenges, examining how targeted public policies can mitigate major disruptions such as pandemics and climate change.

Climate change is among the most pressing challenges of our time. Without coordinated action, emissions from burning fossil fuels will continue to rise, pushing global temperatures toward tipping points—critical thresholds where small increases in warming can trigger large, abrupt, and often irreversible shifts in the climate system. In this talk, ***Climate Change Scenarios and Carbon Tax Policies for the Global Economy***, Dr. Khan will argue that these risks make it essential to study reliable long-run scenarios and to design effective policies that shape the trajectory of the global economy in a sustainable direction.
