## **Reza R. Kholghy (MAAE2300F - Fluid Mechanics I )**

### **Instructor: Reza R. Kholghy MAAE2300F - Fluid Mechanics I**

**Comment #1:** Overall the professor seems caring, but too much focus is placed on derivations and not enough on examples. He seems to think we have all the time in the world to work on this course outside of lecture time, and we simply don't.

**Comment #2:** Professor Kholghy is someone who clearly enjoys teaching and making a difference in his students' lives. The class is hard, but there isn't too much he can do about that.

**Comment #3:** The lecture structure was a bit confusing, especially at the start of the semester. It was often hard to tell what was an example problem and what was the process for deriving an equation for a specific situation. It definitely became a lot easier towards the second half of the semester as you started to follow the slides more. I found that the fast pace of the lectures was sometimes hard to follow along with, which could easily just be a result of having had very few synchronous classes up till this semester, but when I was able to keep up it was very interesting listening to the way you explain the concepts. It was definitely never a boring class. I also found that doing the first two lab reports really helped me understand the course content. Thank you
