

**Department of Geography and Environmental Studies
at Carleton University
ENST1000 [0.5]
Introduction to Environmental Studies
Summer 2024
Instructor: Dr. Kwaku Kusi-Appiah**

This is a foundational course or topic area that explores the complex and interdisciplinary nature of environmental issues. This field of study combines insights from various disciplines such as biology, ecology, geography, chemistry, sociology, economics, and political science to understand the interactions between humans and their natural environment.

Students will learn about how human activities influence the natural world. This includes the study of pollution, deforestation, urbanization, and other forms of environmental degradation. It also looks at the socio-economic forces driving these impacts, such as industrialization, population growth, and consumption patterns.

Prerequisite: Second year standing or permission.

Format: will be run as a 2-hour lecture with a one-hour tutorial. If interested, please send an email (ideally by May 22 2024) indicating your year and program, Carleton student number, CGPA and why you are interested in this course to andykusiappiah@cunet.carleton.ca

Please also enter a registration override request to Carleton Central. Once approved, you will get a message from the system telling you to proceed to registration
