

# GEOG 5005/CDNS 5700 W

# Global Environmental Change

Winter Term 2025 • Wed 11:35-2:25 • Loeb A211

This course will explore a range of interdisciplinary social science perspectives on global environmental change. Course content will examine the drivers, features, and implications of socioecological processes including climate change, biodiversity loss, and various forms of environmental degradation, as well as how these are being experienced, contested, engaged with, and transformed in sites around the world. Readings and discussions will involve case studies that address topics such as natural resource extraction, shifting dynamics of environmental protection, and struggles over proposed climate crisis solutions.
