Geographic Information Systems
GEOG 5804

Academic year: GEOG 5804: Fall 2018
Any changes or corrections will be posted on cuLearn on the first day of
classes each term.

Course title: Geographic Information Systems (GEOG5804)
Department: Department of Geography and Environmental Studies
Faculty of Arts and Social Sciences, Faculty of Science

Instructor: Dan Patterson
Building: B450B Loeb Building
Website: http://www.carleton.ca/geography/people/patterson-dan/
Email: Dan.Patterson@carleton
Phone: My cell number will be provided in class, for text messaging.
Office: To be determined in the first week of each term and posted in cuLearn.

Course Description

Calendar description
GIS for students with no previous experience. Includes data formats and structures,
input/output and analysis capabilities, and GIS applications.

Other information
This is a first course in Geographic Information Systems (GIS) for graduate students who have
not taken undergraduate courses in GIS but may wish to use the technology in their thesis
work. The student will use a simple-to-learn, yet powerful, raster/vector-based GIS package
(ArcGIS with various extensions). The lectures serve as an introduction to some of the
concerns on the nature of geographic data, principles of GIS and map analysis. Topics will
include an analysis of data in a spatial context; database structures for GIS; data query,
summary and presentation; cartographic representation and creation of GIS databases for
analysis. The student will learn how to compile and work with spatial databases and use them
in an area of spatial analysis of interest to them.

The course will be delivered as a 3 hour workshop. The course will be very hands-on and a
certain degree of familiarity with Windows operating system is assumed. Students should be
able to use a wordprocessor, text editor, various operating system applications and others as
needed. Students deficient in these areas will be expected to gain confidence in using these
applications on their own.
**Texts**

There is no text. Web links and in-class instruction will be used since the software platform we will be using is changing this year. There is a myriad of materials on GIS in the library on the main shelves and in the MADGIC section on the main floor which the student is expected to consult. I also maintain a library of GIS and related texts which students are free to borrow.

**Special Note**

Students who are not fully comfortable working with computers will have difficulty in the early stages of the course. Casual use of wordprocessors or the internet does not constitute an adequate background. The course runs 1 day a week for 12 weeks, you will probably require an additional 4-6 hours a week on average to complete assignments. The final project commands between 25 to 50 hours of work based upon prior student efforts. Allocate time accordingly.

**Evaluation and due dates**

**Faculty grading policy:**

"Standing in a course is determined by the course instructor subject to the approval of the Faculty Dean. This means that grades submitted by the instructor may be subject to revision. No grades are final until they have been approved by the Dean."

**Course grade:**

- Attendance 5%
- Esri campus course 5%
- Laboratory assignments 30% (3 assignments, 10% each)
- Laboratory test 30%
- Final Project 30%

**Attendance**

You are either here for the workshop, or you are not. Think of this as 0.5% per week with a discretionary absence of 2 weeks. I will not entertain any deviations from this, so plan accordingly in the case of inclement weather or other misadventures.... and don’t bother letting me know you will be late...

**Virtual Campus Courses**

This provides the student the chance to select a topic that may be of interest to them that aren't expressly covered in the course, or to examine a topic in more detail. The courses are online and can be completed within the first 3 weeks of class. See the following links

[Virtual campus courses](#) and [Course listings](#)

Specific details will be discussed in class and all selections must be approved before you begin them
Test
There will be one test which deals with the practical aspects of GIS (30% of final grade). Some of the test questions may be given to ahead of time to give you a chance to think about how you would answer the questions. You will actually answer the questions during the workshop period (see the schedule).

Lab Assignments
There will be a three lab assignments and on-line questions that need to be answered, due dates are noted in the schedule. (30% of final grade).

Learning Module
You are required to produce a Learning Module (30% of final grade). There will be a written submission and you will present your results/findings/demonstration during a 10 minute presentation towards the end of term.

The purpose of the Learning Module is for you to examine, in detail, one of the extensions and/or scripts that can be used with ArcGIS. The learning unit should clearly demonstrate the requirements and application to solving a geographic problem.

The learning module can be analysis-based, for example:

- An analysis of interpolation methods: comparison of several interpolation techniques.
- An analysis of Watershed X's hydrologic properties.
- An attempt to optimize bus routing.
- An exploration of the affect of scale on Moran's I statistic.
- An spatial analysis of point/line/areal pattern X in location Y.
- Routing algorithms and their implementation in GIS.
- Tools and techniques for point pattern analysis.
- Your far superior suggestion goes here...

This provides you with the opportunity to link GIS with your own areas of interest or research. Students are encouraged to discuss their module in advance. Due dates are listed in the attached schedule.

Late policy:
There are no late assignments unless accompanied by a medical certificate covering you for the period from assignment issue date to assignment due date. For non-medical issues, contact me directly and as soon as possible. Otherwise, hand in what you have completed by the due date.
**General University Rules and Regulations**

**Academic Accommodation:**
You may need special arrangements to meet your academic obligations during the term. For an accommodation request the processes are as follows:

**Pregnancy obligation:**
Write to me with any requests for academic accommodation during the first two weeks of class, or as soon as possible after the need for accommodation is known to exist. For more details see the Student Guide.

**Religious obligation:**
Write to me with any requests for academic accommodation during the first two weeks of class, or as soon as possible after the need for accommodation is known to exist. For more details see the Student Guide.

**Academic Accommodations for Students with Disabilities:**
The Paul Menton Centre for Students with Disabilities (PMC) provides services to students with Learning Disabilities (LD), psychiatric/mental health disabilities, Attention Deficit Hyperactivity Disorder (ADHD), Autism Spectrum Disorders (ASD), chronic medical conditions, and impairments in mobility, hearing, and vision. If you have a disability requiring academic accommodations in this course, please contact PMC at 613-520-6608 or pmc@carleton.ca for a formal evaluation. If you are already registered with the PMC, contact your PMC coordinator to send me your Letter of Accommodation at the beginning of the term, and no later than two weeks before the first in-class scheduled test or exam requiring accommodation (if applicable). After requesting accommodation from PMC, meet with me to ensure accommodation arrangements are made. Please consult the PMC website for the deadline to request accommodations for the formally-scheduled exam (if applicable).
