

ETHICAL ISSUES IN HEALTH & HEALTHCARE

Is public health about disease screening
or surveillance?

Does signing a consent form make
research ethical?

What are the risks of integrating artificial
intelligence into medical decision
making?

This course takes an interdisciplinary
approach to considering ethical questions
in real-world health and biomedicine
contexts, providing students with a broad
perspective on current challenges and
opportunities for further critical analyses
in the areas of health and medicine.

**This course is open
to all Fourth Year
Standing & Graduate
students**

Thursdays: 6:00 - 9:00 PM (EST)
Classroom TBD
