2023-2024	11.1069	7.2767	1.2767	3.13

(1) Pension Adjustments

(a) From July 1, 1982 onwards, the Annual Pension Adjustment formula equalled the four-year average Fund Rate less 6%.

(b) Pension accrued after July 1, 2003 can increase or decrease based on the Annual Pension Adjustment formula. In periods where the Annual Pension Adjustment formula results in a negative number, the pension accrued prior to July 1, 2003 is not reduced, but subsequent increases are based on the pension as if it had been reduced.

(c) The annual pension adjustment is applied each July 1st, following the period under review. After June 30, 2001, the Pension Adjustment formula was amended to use 6% as the Fund Rate for any pre-retirement year included in the formula.

For complete details, please review your annual pension/benefit statement or refer to the Retirement Plan Text.
