Instructor: Scott Gales
scottgales@gmail.com
Room 446 Azrieli Pavilion
Tel. 613 • 560 • 2600, ext. 5672

Teaching Assistant: TBA
Office Hours: During studio/lecture hours or by appointment.

Time and Location: Please refer to Carleton Central under Student Services – Registration – Search Schedule: https://admissions.carleton.ca/faqs/where-can-i-find-the-class-schedule/

Course Description:
Examination of complex product geometry utilizing 3D computer applications. Topics include spline, surface and solids construction, surface verification tools, and rendering tools and techniques. Workflow, robust design, reverse design techniques and 3D printing will be explored through exercises. Includes: Experiential Learning Activity. Prerequisite(s): IDES 2105. Lecture and tutorials three hours a week.
Learning Outcomes:
By the end of this course, students will be able to:
1. Achieve a higher competency in industrial design product development and planning, using 3D CAD software and rendering.
2. Have a holistic understanding of solids and surface types feature creation methods in Solidworks (SW).
3. Construct complex geometries in SW utilizing surface feature tools.
4. Edit various surface types including surface offsets and trims.
5. Use hybrid modeling techniques such as using surfaces to modify and create solids.
6. Utilize a planned workflow approach for achieving design intent for complex geometries and assemblies.
7. Create and control splines and curves in 3D CAD environment.
8. Apply a more robust modeling strategy for part and feature creation by applying best practices in regards to SW sketches, dimensions and feature creation and control.
9. Create thin walled parts for injection molding and typical features such as ribs and bosses.
10. Be familiar with the design of small electronic housings.
11. Apply reverse designing techniques.
12. Create robust assemblies and multi-body parts.
13. Be familiar with surface transitions and radius of curvature issues such as CO, C1 and C2 Continuity.
14. Describe tolerances, allowances and types of fit.
15. Render advanced photo-realistic representations of 3D CAD models in Keyshot and/or PhotoWorks and integrate context.
16. Apply technical drawing standards for injection molded parts.
17. Prepare a model for 3D printing.

Required Materials:
Materials required for the course are listed below. You may be asked by your instructor to refer to cuLearn and ARES for a more comprehensive list of required materials.

Students will require the regular use of measuring calipers during the course.

**Computer Requirements:**

Please refer to the computer requirements on the School of Industrial Design Website:

http://www.id.carleton.ca/undergraduate/about-the-bid-program/computer-requirements

The current version of Solidworks (as supplied by the School of Industrial Design) must be installed before the first scheduled class and is available from the school’s computer technician.

**Course Deliverables:**

These are the deliverables for this course. Please see Appendix A Course Schedule for more detailed information.

In lab exercises - (10 labs, 3% each) 30%

Major project progress review – Oct 28th – 5%

Quiz 1 – Oct 28th – 10%

Rapid prototype part files submitted to model lab for printing by Nov 20th

Rapid prototype part for major project – bring to class on Nov 25th

Quiz 2 – Nov 18th – 10%

Final presentation of major project and written report - Dec 2nd - 45%.

**Individual/Group Work**

Courses may include individual and group work. It is important in collaborative work that students clearly demonstrate their individual contribution.
**Studio Review Attendance**

Attendance at scheduled SID Reviews is mandatory. These are equivalent to exams when indicated in the course outline. Failure to attend the Review without reasonable cause, will result in a grade of F. Students arriving late for the Review or not remaining for the complete session without approval from the instructor, will be addressed on a case-by-case basis at the discretion of the instructor.

If you are not able to attend a Review, foresee arriving late or need to leave before it is complete, please email your instructor in advance explaining the reason for the situation. It is important that you provide a reasonable rationale for your absence, late arrival or early departure. In the event of an illness or death in the family, you will be required to sign a form verifying your claim and this form is available through the SID administration office.

**Late Submission of Lecture & Studio Deliverables**

Students who do not hand in deliverables on time will have their earned grade reduced by 10% per day up to a maximum of 3 days.

**Participation and Professionalism**

Active participation and professional conduct (e.g. class discussion, consultations with instructors, work ethic, etc.) are important in lecture and studio courses and may be formally evaluated by a grade.

**Student Access to Quiz, Test and Exam Papers**

Examinations are for evaluation purposes only and will not be returned to the student.

**Requests for Academic Accommodation**

You may require special arrangements to meet your academic obligations during the term. For an accommodation request for any of the following topics below, refer to the link provided for more information: [https://students.carleton.ca/course-outline/](https://students.carleton.ca/course-outline/)
• Parental Leave
• Religious/Spiritual Obligation
• Academic Accommodations for Students with Disabilities
• Survivors of Sexual Violence
• Accommodations for Student Activities

Academic Integrity

Carleton’s Policy on Academic Integrity is available at: https://carleton.ca/registrar/academic-integrity/ and covers the following topics:

Plagiarism (e.g. submitting work in whole or in part by someone else, failing to acknowledge sources through the use of proper citations when using another’s work).

Test and Exam Rules (e.g. attempting to read another student’s exam paper, speaking to another student even if the subject matter is irrelevant to the text, using material not authorized by the examiner).

Other Violations (e.g. improper access to confidential information, disruption in classroom activities, misrepresentation of facts for any academic purpose).

The policy governs the academic behavior of students. In industrial design, ideas and concepts come from a multitude of sources and may be modified and utilized in the design and development process. The student should reference such sources appropriately and it is strongly advised that you read Carleton’s Policy on Academic Integrity prior to conducting any work at the University.

Student Responsibility

The student is responsible for knowing the content of this course outline; the schedule of classes, assignments, and/or Reviews; and the material that was covered when absent. The studio is a professional environment and students should be working during the scheduled hours.
Unless otherwise arranged, the class will meet during scheduled class hours. Please note that attendance is important since issues and questions may be raised in class, and announcements made, along with information disseminated through cuLearn. As external professionals are often involved in our work, scheduling changes for guest lectures, presentations, and Reviews may occur at short notice, requiring students to stay informed.

**Changes to the Course Outline**

The course outline may be subject to change in the event of extenuating circumstances.

**Appendix A - Course Schedule**

Sept 9th – Week 1 – Introduction

Sept 16th – Week 2 – Robust geometry and Design Intent

Sept 23rd – Week 3 - Surfacing

Sept 30th – Week 4 - Surfacing

Oct 7th – Week 5 - Surfacing

Oct 14th – Thanksgiving – no class

Oct 21st – Fall break

Oct 28th – Week 6 - Surface Editing + Quiz 1 + Project planning review due

Nov 4th – Week 7 – Surfacing

Nov 11th – Week 8 – Assemblies and Multibodies

Nov 18th – Week 9 – CAD for manufacturing + Quiz 2

Nov 25th – Week 10 – Rendering and Technical Drawings + 3D printed part due

Dec 2nd – Week 11 – Final project presentations

Dec 6th – Final class
