## **JOB POSTING: JUNIOR INDUSTRIAL DESIGN**

### **COMPANY INFORMATION**

Hardware Rebels is a company that encompasses three strategic poles with the aim of offering to North-American businesses working in the commercial and residential furniture markets to buy directly in China, with, in addition, local support on market knowledge, specialized hardware product design expertise and offshore supply management.

Hardware Rebels offers expertise in product design that gives business partners support some level into their component design process or complete 'turnkey' assistance if they do not benefit from in-house industrial design. This expertise aims as much toward new standard component development for clients as to specific components for government projects or for short-term window projects, but with volume.

### **JOB DESCRIPTION**

#### **Main responsibilities**

The industrial designer assists in conception, design and image of all products manufactured for the company or in co-development. The industrial designer will be working directly with the CEO & COO on most projects.

#### **Tasks description**

- Designs, models and produces detailed plans of components in accordance with the design process of specialized products aiming at the furniture market.
- Build parts library for the company, clients or projects depending on the case.
- Participates in the product creation process.
- Produces the drawings for fabrication, assembly, installation, presentation and/or certification.
- Respects quality-control processes in accordance with product design and engineering.
- Follow-up with vendors and resolves production-related issues.
- Prioritizes standardization of components in product development.
- Responsible of the packaging design and conceiving product instructions according to client requirements.
- Produces 3D models and renderings.
- Graphic design for presentations & website.

#### **Skills**

- Creative thinking.
- Innovation capacity.
- Verbal and written communications.
- Teamwork-oriented personality.
- Sense of work organization.

#### **Qualifications required**

- Undergraduate / College diploma in the Industrial Design or related field.
- French and English, spoken and written.
- Experience with metal components and asset
- Mastered Softwares: SolidWorks, Adobe Suite, MS Office.

#### **Benefits**

- Full time position (40hrs/week)
- Collective RRSP after 6 months
- Salary: Based on experience
