Job Description

Industrial Designer Summer Internship

Company Background

Metaphase Design Group is the leading expert in ergonomic product design and worldwide specialists in the design of handheld products. Our firm serves innovative start-ups through global, Fortune 500 companies. As a result, there is an exciting diversity to the products and industries we support using our user-centered design innovation strategy. Our portfolio includes robotic surgical systems, surgical instruments, drug delivery devices, consumer electronics, food and beverage packaging, beauty and personal care products, and graphical user interfaces.

Job Description

Metaphase is seeking an Industrial Design intern with Human Factors skills to support product development and human factors/user experience research programs using our user-centered design innovation strategy.

We are looking for:

- Curious-minded achiever who can resolve complex problems.
- Self-directed individual who takes ownership of their work and leads in continuous improvement in our team's effectiveness, productivity, and results.
- Natural ability to communicate complex concepts into easily understood ideas to clients, verbally and in written format.
- Ability to work independently and collaboratively with other Metaphase team members.
- Outstanding organization, time management, written and verbal communication, and interpersonal skills.
- Ability to interpret and apply anthropometric databases and scientific publications to supplement research insights and inform design.
- Keen interest in primarily working on medical devices, instruments and surgical systems, and consumer products, from research to human factors through to industrial design.
