

Re4m's Design and Production technician will be working closely with industrial designers and wood workers in producing eco-made furnishings, displays and structures using reclaimed and rescued materials. At Re4m, problem solving is essential as we are constantly designing and building a variety of items with discarded materials as our foundation. Knowledge of material properties, material safety, production techniques, design software and woodworking is required.

Re4m's design and production technician will have duties such as using woodworking machinery to produce products, complete drawings / plans for projects, understand how to manipulate materials such as plastics, wood and some metals, they will also be asked to assist in some business operations such as collecting materials and supplies, reviving materials, communicating with clients, and marketing.

Apply by emailing [connect@re4m.ca](mailto:connect@re4m.ca) and use Design Internship as the subject line.
