

Carleton
UNIVERSITY

**The Norman Paterson School of
International Affairs**

Perry Steckly researches and explores human behaviour through a variety of lenses and appreciates all it has to offer – the good, the bad and especially the ugly. He enjoys exploring what we say and do, and the many factors that influence our decisions and actions. An extensive policing and intelligence career fostered his keen interest in people and fueled his consultant company which has captured the interest of the justice, defence, security and intelligence sectors. He has blended his passion of human behavior, profiling, intelligence and training into a variety of services and programs. Perry spends time with fascinating, dedicated professionals working on integral and meaningful projects.

Perry's operational intelligence experience includes many multi-jurisdictional, long-term, joint-forces and complicated projects. His niche was profiling individuals involved in organized crime and terrorism as well as their social networks subsequently designing elaborate, long-term recruitment strategies to foster cooperation. He has been involved in provincial and national threat and risk assessments involving strategic, tactical, SIGINT, OSINT, HUMINT and subsequent analysis for the G7, G8, G20 OAS meetings as well as the importation of Russian plutonium to Canada. He participated in a variety of task forces including the 911 Canada/USA Joint Task Force and subsequently conducted the threat and risk assessment of the critical infrastructure in the National Capital area.

Perry has enjoyed sharing his experiences and novel approaches through twenty-plus years of designing and delivering presentations, programs and services for the justice, defence, security and intelligence sectors. Perry shares his insight while challenging students at Carleton's post-graduate Critical Infrastructure Risk Assessment Course (Infrastructure Protection and International Security Program) at the Norman Paterson School of International Affairs. Most recently, and in partnership with Carleton University, Natural Resources Canada, and the Canadian Nuclear Laboratories, he is working to establish the National Centre for Critical Infrastructure Protection, Security and Resilience, a not-for-profit collaborative with a mission to bridge sectors, advance knowledge and drive meaningful change.

Perry is a research partner with the Ottawa Hospital Research Institute and the Imagine Network which plays host to a collaborative group of gastroenterologists, psychiatrists, psychologists, microbiologists, geneticists, health economists, epidemiologists, and neurobiologists to better understand the association between the microbiome and mental health. He is the founder of Thriving Gut Microbiome Action Group, a not-for-profit corporation focused on providing accessible, evidence-based strategies for promoting physical and mental health by leveraging microbiome research. His mission is to unite government, industry and academia to drive evidence-based health strategies into our healthcare system.

Perry provides coaching and consulting services and uses his Elevate Trilogy: TouchPoint 2.0, AMPLIFY and DeepDIVE to help individuals and organizations drive significant change while optimizing performance at an accelerated pace. Perry employs his DYNAMIC Model, a comprehensive framework that brings transformative growth to both personal and professional realms. This model leverages insights from cognitive psychology, biology, and neuroscience to enhance the understanding of cognitive processes and neural mechanisms that drive human behaviour.

Perry is energetic and fun. He is married and the lucky father of three amazing daughters.
