Fourth-Year Capstone Project Registration (Course MAAE4907x)

Over the past view weeks Matthew DiGiuseppe at Carleton’s Educational Development Centre (EDC) has been slightly re-designing the EDC website build to assist us with better tracking ... and I am hopeful that it will make the process better.

You may now register your three (3) Capstone project choices by typing the link

into your web browser and selecting your three (3) project choices on the EDC form that appears. Projects are listed alphabetically. You will need to login to this site using your MyCarletonOne Username and your Password. However, before you look at the EDC site and form there are a few additional items to know before you make your selections:

(1) Prerequisite(s): Fourth-year status in Engineering and completion of, or concurrent registration in, AERO 4003 or AERO 4842 or MECH 4003 or MECH 4013 or SREE 4001 is necessary. If you do not have fourth-year status by Sept. of this year, then you will be de-registered from the project and your schedule will need to be altered. If you do not have summer course results at this time, then please wait until you have confirmation of your status before you register for a project.

(2) Your project selections will be used to guide your placement and we will endeavour to place you in a project based on your choices; however, it is not possible to guarantee your placement in one of the three projects you select.

(3) Placement into a project is not done on a first-come first-serve basis but your assignment to a project will begin towards the beginning on July.

(4) Very Important!

When you login, your name & student number will be automatically filled-in on the EDC form, and when you submit the form it will e-mail you a copy of what you have entered. You can go back to the form at any time to review what you entered, but it cannot be altered or resubmitted ... thus, be careful what choices you make!

(5) The Hybrid Natural Gas Vehicle (HNG) project will be replaced next year with an Integrated Autonomous Vehicle (IAV) project ... if you are interested in the IAV project, then please select the HNG project on the EDC form.

(6) Additional information about each project is available at

If you have any questions about any of these projects, or the registration process, etc. then please contact me via e-mail at your convenience.

Regards,

J. Gaydos,
Capstone Coordinator 2018-19.
