"What is Neurophilosophy: A Methodological Account"

Georg Northoff
Research Unit Director
Mind, Brain Imaging and Neuroethics
Canada Research Chair, University of Ottawa

The Michael Smith Chair, ELJB-CIHR
Royal Ottawa Healthcare Group
University of Ottawa Institute of Mental Health Research

Neurophilosophy is a discipline at the crossroads between philosophy and neuroscience which has gained much attention recently. The main aim of neurophilosophy in its current gestalt is to apply neuroscientific methodology to philosophical concepts and to consequently reduce the latter to neuronal mechanisms. What remains unclear though is how a specifically neurophilosophical methodology can look like one that neither exclusively adopts neuroscientific methodology nor falls back onto philosophical methods. The aim of my talk is therefore to present an outline of a specifically neurophilosophical methodology one that allows to link neuroscientific facts and philosophical concepts in a non-reducitonistic and non-eliminative way.
