

# NOTE ON SAGE RESEARCH METHODS SERIES (QRMS, Applied, QASS)

---

*François Brouard, DBA, FCPA, FCA  
Sprott School of Business, Carleton University*

---

This note offers three lists of the Sage research methods series, namely Qualitative Research Methods Series (QRMS) (The Little Blue books), Applied Social Research Methods Series (ASRMS or Applied), and Quantitative Applications in the Social Sciences Series (QASS) (The Little Green books).

## Qualitative Research Methods Series (QRMS) (see Appendix A)

“Little Blue Books, SAGE’s popular Qualitative Research Methods series, provide short and accessible texts on all kinds of qualitative methods. Providing clear explanations, and commentary on both theoretical and practical considerations in the implementation of qualitative research, these supplementary texts are appropriate for the individual researcher, and for any graduate-level, intermediate, or advanced qualitative methods course across the spectrum of academic disciplines. Our brief volumes address a full range of advanced qualitative topics including writing up qualitative research, participatory action research, feminist fieldwork analysis, discourse analysis, and ethnography.”  
(<https://methods.sagepub.com/>)

## Applied Social Research Methods Series (Applied) (see Appendix B)

“The Applied Social Research Methods book series by multiple authors includes books Survey Research Methods, Research Synthesis and Meta-Analysis: A Step-by-Step Approach, Methods for Policy Research, and several more.” (<https://methods.sagepub.com/>)

## Quantitative Applications in the Social Sciences Series (QASS) (see Appendix C)

“Little Green Books, SAGE’s popular Quantitative Applications in the Social Sciences series, provide short and accessible texts on all kinds of quantitative methods. Providing clear statistical explanations, straightforward empirical examples, and ready-to-use procedures, these supplementary texts are appropriate for the individual researcher, and for any graduate-level, intermediate, or advanced statistics course across the spectrum of academic disciplines. Our brief volumes address a spectrum of advanced quantitative topics including regression, models, data analysis, experimental design, measurement, survey data, and more.”
