### COURSE DESCRIPTION/INSTRUCTOR'S STATEMENT

This course is an introduction to the burgeoning discipline of climate change psychology. Students will learn theories, concepts, and empirical evidence emerging from various sub-domains of psychology (e.g., cognitive, developmental, social, behavioural) that explains how individuals and social groups think, feel, and behave in response to climate change. With an emphasis on the mental health impacts of climate change on younger generations, this course will strengthen students' knowledge and skills they need to navigate the climate crisis with purpose and strength.

The course is online unscheduled.

### EVALUATION (SUBJECT TO CHANGE)

Students will be evaluated with critical reflection assignments and a final project.

### TEXT

There is no textbook for this course. Students will be assigned readings from the published literature.
