

**Carleton**  
UNIVERSITY

Department of  
**Systems and  
Computer Engineering**

## **ECOR 1041 Computation and Programming Fall 2023**

**Instructor**

**TA name(s)**

### **Course Description and requirements**

#### **1) Course description**

Software development as an engineering discipline, using a modern programming language. Language syntax and semantics. Tracing and visualizing program execution. Program style and documentation. Testing and debugging tools and techniques.

Lectures three hours per week, laboratories three hours per week.

<http://calendar.carleton.ca/undergrad/courses/ECOR/>

#### **2) Prerequisites**

This course may not be taken concurrently with ESLA 1300 or ESLA 1500.  
Precludes additional credit for COMP 1005, COMP 1405, ECOR 1051, ECOR 1606, SYSC 1005.

#### **3) Prior Knowledge**

No prior experience in computer programming is required. The only background we assume is:

- *language*: reasonable proficiency in reading and writing English;
- *math*: understanding of integers and operations on integers; understanding of functions as mappings from one set (the domain) to another set (the codomain);

- *logic*: familiarity with logical *and*, *or* and *not*;
- *computer literacy*: ability to use email, browse the World Wide Web, and edit textfiles.

#### 4) Course Objectives

The course introduces students to concepts that are central to understanding computation and teaches students how to design, code, test, and debug small-scale programs written in the Python programming language. By the end of this course, students should:

- know how integers and floating-point numbers are represented on a computer.
- know the fundamental concepts of procedural programming, using Python as the programming language.
- have developed a "mental model" of computation; in other words, learned how to reason about and visualize the execution of program code.
- understand the use of software experiments as an aid to learning.

#### 5) Accreditation Units

For more information about Accreditation Units, please visit:

<https://engineerscanada.ca/>The course has 27 AUs divided into:

Math	Natural Science	Complementary Studies	Engineering Science	Engineering Design
			100%	

#### 6) Learning outcomes / Graduate Attributes

By the end of this course, students should be able to:

1. Represent signed and unsigned integers and decimal numbers using binary representation; explain the limitations of real-number computation using floating-point arithmetic.
2. Evaluate expressions consisting of literal values, variables, and operators, using the same evaluation rules as Python. In other words, predict the values that Python calculates when it evaluates expressions.
3. Design and implement Python programs that include Python's lists and fundamental constructs for controlling program execution to solve a given

problem. The constructs include: (1) sequential execution as determined by the ordering of executable statements; (2) selection (if, if-else, and if-elif-else statements); (3) repetition (for and while statements); (4) function calls.

4. Trace short Python programs. In other words, explain what happens, step-by-step, as the computer executes each statement
5. Visualize Python code execution; in other words, draw diagrams that depict the variables in the program's global frame and function activation frames (function arguments and local variables), and the objects that are bound to the variables.
6. Design, implement, execute, trace and test simple functions using Python. Testing should be done using the Python shell and simple unit-testing framework.
7. Debug a program using simple debugging techniques (e.g., inserting print statements to instrument code or by tracing the code using a program visualization tool)
8. Explain the "client-side" view of one Python container for organizing data, namely: lists

The Canadian Engineering Accreditation Board requires graduates of undergraduate engineering programs to possess 12 attributes. Courses in all four years of our programs evaluate students' progress towards acquiring these attributes. Aggregate data (typically, the data collected in all sections of a course during an academic year) is used for accreditation purposes and to guide improvements to our programs. Some of the assessments used to measure GAs may also contribute to final grades; however, the GA measurements for individual students are not used to determine the student's year-to-year progression through the program or eligibility to graduate.

This following list provides the GAs that will be measured in this course, along with the learning outcomes that are intended to develop abilities related to these attributes.

GA - Indicator	Assessment Tool
1.3 Knowledge base for engineering: Fundamental engineering concepts	All

## 6) Texts

required, supplementary, other

## 7) Course Schedule

## **8) List of Topics:**

1. Introduction to Python: using the Python shell as a calculator. Numeric types (int and float); operations supported by these types. Construction and evaluation of expressions.
2. The binary number system. Representation of integers and floating-point numbers in binary. Limitations of real-number representation in binary.
3. The assignment operator: binding values to variables. Using variables in expressions. Using Python Tutor to visualize assignment operations.
4. Calling built-in functions from the shell. Importing functions from modules. Evaluating call expressions.
5. Defining functions. Passing arguments to and returning values from functions. Using the shell to test functions interactively. Using Python Tutor to trace and visualize the execution of function definitions (creation of function objects), function calls, and function execution. Using local variables in function definitions.
6. Simple programs (scripts). The print functions. Functions that do not have return statements.
7. A step-by-step recipe for designing functions.
8. Using a simple unit-testing framework to automate testing.
9. Character strings (type str). Interactive programs (scripts): the input function.
10. Boolean values (type bool). Boolean operators. Relational operators. Evaluating expressions that have numbers, boolean and relational operators. Comparing strings. Making decisions: (if, if-else, if-elif-else, and if-elif statements).
11. Lists: Python's list type; creating list objects; list operators, built-in functions, and methods. Using a for loop to iterate over a list. Using the range function to generate a sequence of list indices.
12. Repeating actions until a condition is satisfied (while statements).

## **9) Course Schedule**

Topics, (assignments, lab report, project report) due dates, exam/test dates, lab/PA schedule

## **10) Evaluation and Marking Scheme**

All the elements that will contribute to the cumulative grade earned and the overall approximate grade breakdown for the course.

a) Final Exam:

i) Include the following statement

**Final exams are for evaluation purpose and will not be returned to students.**

ii) Include any exam condition (eg. Closed-book, type of calculator ...) and requirement (eg. Minimum grade on final exam to pass the course)

iii) Final exam weight [Fall 2022/Winter 2023/Summer 2023]

1 - In any course that assigns less than 50% to a proctored final exam, the professor will notify the department of the revised grading scheme with a description of how the marking scheme ensures that the final grade is reflective of each individual student's abilities and understandings.

2 - The proctored exam (except where an exception has been granted) will be worth a minimum of 25% of the final grade.

3 - A minimum of 50% of the final grade will be justifiably based on individual student work

iv) Deferred Final Examinations

Students who are unable to write the final examination because of a serious illness/emergency or other circumstances beyond their control may apply for accommodation by contact the Registrar's office. Consult the Section 4.3 of the University Calendar (<https://calendar.carleton.ca/undergrad/regulations/academicregulationsoftheuniversity/examinations/>)

c) Additional requirement(s):

Please consult Section 5 of the undergraduate regulations

(<https://calendar.carleton.ca/undergrad/regulations/academicregulationsoftheuniversity/grading/>)

If additional requirements beyond the cumulative grade earned in the course (for example, a requirement that students complete/pass certain assignments,

examinations, lab, project components, or attend a minimal number of lab/PA sessions in order to pass the course), this should be clearly identified in the course outline.

d) Exam format and e-proctoring statement

**Engineering Courses shall have on campus and proctored final examinations. The final exam may be in electronic format (ie. Student will write the exam on campus and use either their computer or a university-owned computer).**

**If you intend to have the electronic format exam, then it must use an e-proctoring option provided by the university and the following note must be added to the course outline:**

**e-Proctoring:** Please note that tests and examinations in this course will use a remote proctoring service provided by Scheduling and Examination Services. You can find more information at <https://carleton.ca/ses/e-proctoring/>.

e) Self-Declaration form and Deferred Term work

Calendar language (Section 4.4

<https://calendar.carleton.ca/undergrad/regulations/academicregulationsoftheuniversity/examinations/#deferred-term-work>):

Students who claim illness, injury or other extraordinary circumstances beyond their control as a reason for missed term work are held responsible for immediately informing the instructor concerned and for making alternate arrangements with the instructor and in all cases this must occur no later than three (3) days after the term work was due. The alternate arrangement must be made before the last day of classes in the term as published in the academic schedule.

Instructors can require (or not) the student to submit the self-declaration form. Include the following statement if you require the student to submit a completed self-declaration form:

**Consult with the instructor no later than 3 days after any missed course work or midterm examination.**

or

**Contact the instructor with the completed self-declaration form no later than 3 days after the date/deadline of term work including test/midterm, labs, assignments.**

## Copyright

The materials (including the course outline and any slides, posted notes, videos, labs, project, assignments, quizzes, exams and solutions) created for this course and posted on this web site are intended for personal use and may not be reproduced or redistributed or posted on any web site without prior written permission from the author(s).

## Advising and Counselling services

### a) Engineering Academic Advising

The Engineering Academic Support Service : <https://carleton.ca/engineering-design/current-students/undergrad-academic-support/> assists undergraduate engineering students with course selection, registration, and learning support from first-year through to graduation.

Academic Advisors Contact : <https://carleton.ca/engineering-design/current-students/undergrad-academic-support/undergraduate-advisors/>

### b) Student Mental Health Service

As a University student you may experience a range of mental health challenges that significantly impact your academic success and overall well-being. Carleton's Wellness Services Navigator <https://wellness.carleton.ca/navigator/> is designed to help students connect with mental health and wellness resources. If you need to talk to someone, please reach out for assistance: <https://carleton.ca/health/emergencies-and-crisis/>.

## Learning and Working Environment

The University and all members of the University community share responsibility for ensuring that the University's educational, work and living environments are free from discrimination and harassment. Should you have concerns about harassment or discrimination relating to your age, ancestry, citizenship, colour, creed (religion), disability, ethnic origin, family status, gender expression, gender identity, marital status, place of origin, race, sex (including pregnancy), or sexual orientation, please contact the Department of Equity and Inclusive Communities at [equity@carleton.ca](mailto:equity@carleton.ca)

We will strive to create an environment of mutual respect for all through equity, diversity, and inclusion within this course. The space which we work in will be safe for everyone. Please be considerate of everyone's personal beliefs, choices, and opinions.

## Academic Integrity and Plagiarism

a) Please consult the Faculty of Engineering and Design information page about the Academic Integrity policy and our procedures: <https://carleton.ca/engineering-design/current-students/fed-academic-integrity> Violations of the Academic Integrity Policy will result in the assignment of a penalty such as reduced grades, the assignment of an F in a course, a suspension or, expulsion.

b) One of the main objectives of the Academic Integrity Policy is to ensure that the work you submit is your own. As a result, it is important to write your own solutions when studying and preparing with other students and to avoid plagiarism in your submissions. The University Academic Integrity Policy defines plagiarism as "presenting, whether intentionally or not, the ideas, expression of ideas or work of others as one's own." This includes reproducing or paraphrasing portions of someone else's published or unpublished material, regardless of the source, and presenting these as one's own without proper citation or reference to the original source.

Examples of violations of the policy include, but are not limited to:

- any submission prepared in whole or in part, by someone else;
- using another's data or research findings without appropriate acknowledgement;
- submitting a computer program developed in whole or in part by someone else, with or without modifications, as one's own;
- failing to acknowledge sources of information through the use of proper citations when using another's work and/or failing to use quotations marks; and
- unless explicitly permitted by the instructor in a specific course, the use of generative AI and similar tools to produce assessed content (such as text, code, equations, images, summaries, videos, etc.).

## Academic Accommodations

You may need special arrangements to meet your academic obligations during the term. For an accommodation request the processes are as follows:

**Pregnancy obligation:** write to me with any requests for academic accommodation during the first two weeks of class, or as soon as possible after the need for accommodation is known to exist. For accommodation regarding a

formally-scheduled final exam, you must complete the Pregnancy Accommodation Form (click here).

**Religious obligation:** write to me with any requests for academic accommodation during the first two weeks of class, or as soon as possible after the need for accommodation is known to exist. For more details click here.

**Academic Accommodations for Students with Disabilities:** The Paul Menton Centre for Students with Disabilities (PMC) provides services to students with Learning Disabilities (LD), psychiatric/mental health disabilities, Attention Deficit Hyperactivity Disorder (ADHD), Autism Spectrum Disorders (ASD), chronic medical conditions, and impairments in mobility, hearing, and vision. If you have a disability requiring academic accommodations in this course, please contact PMC at 613-520-6608 or [pmc@carleton.ca](mailto:pmc@carleton.ca) for a formal evaluation. If you are already registered with the PMC, contact your PMC coordinator to send me your Letter of Accommodation at the beginning of the term, and no later than two weeks before the first in-class scheduled test or exam requiring accommodation (if applicable). After requesting accommodation from PMC, meet with me to ensure accommodation arrangements are made. Please consult the PMC website for the deadline to request accommodations for the formally-scheduled exam (if applicable).

**Survivors of Sexual Violence:** As a community, Carleton University is committed to maintaining a positive learning, working and living environment where sexual violence will not be tolerated, and where survivors are supported through academic accommodations as per Carleton's Sexual Violence Policy. For more information about the services available at the university and to obtain information about sexual violence and/or support, visit:  
<https://carleton.ca/equity/sexual-assault-support-services>

**Accommodation for Student Activities:** Carleton University recognizes the substantial benefits, both to the individual student and for the university, that result from a student participating in activities beyond the classroom experience. Reasonable accommodation will be provided to students who compete or perform at the national or international level. Write to me with any requests for academic accommodation during the first two weeks of class, or as soon as possible after the need for accommodation is known to exist.  
<https://carleton.ca/senate/wp-content/uploads/Accommodation-for-Student-Activities-1.pdf>
