

Batteries accepted list

Single-use batteries

Also called primary batteries, or dry-cell single-use batteries, these are common household batteries that can't be recharged and need to be replaced when they lose their charge.

Common types:

A, AA, AAA, C, D, 9V and button (coin) cell.

Typically include Alkaline, Zinc-Carbon and Lithium Primary.

Rechargeable batteries

Also called secondary cell, or storage batteries, rechargeable batteries can, of course, be charged over and over, but they lose capacity over time and just like their single-use counterparts, will have to be replaced.

Common types:

A, AA, AAA, C, D, 9V, button cells, as well as large rechargeable batteries weighing less than 5 kilograms.

Typically include Lithium-Ion, Nickel Cadmium, Nickel Metal Hydride, and Small Sealed Lead Acid (SSLA)

Damaged lithium batteries (swelling) and leaking batteries are NOT ACCEPTED.
