

# TIMG 5301 APPLIED ANALYTICS FOR TECHNOLOGY INNOVATION MANAGEMENT

Fall 2023 Institute of Technology Entrepreneurship and Commercialization, Carleton University

Professor Weiss Tue, 6-9pm michael weiss@carleton.ca

Updates to this outline will be made as necessary.

Version 2.2

# Instructor availability

The instructor is available via e-mail and Slack (preferred) any time. Office hours before class or by appointment.

#### Time and location

Tue, 6-9pm, hybrid (Nicol Building 4030 and online via BigBlueButton in Brightspace)

You can attend the class both in-person and online. Presentations of assignments will take place online. If you are attending in-person, be considerate of others: wear a mask, and ensure physical distancing.

# Calendar description

#### TIMG 5301 [0.5 credit] Applied Analytics for Technology Innovation Management

Application of advanced business analytics in the domain of technology innovation management and technology entrepreneurship. Topics include supervised and unsupervised machine learning, anticipatory thinking, and anomaly detection, to inform managerial judgement and support strategic and operating decisions faced by managers and entrepreneurs.

Includes: Experiential learning activity

Prerequisites: TIMG 5001

#### **Course objectives**

The focus of this course is on the application of business analytics to managerial judgment and supporting strategic and operating decisions faced by managers and entrepreneurs. It is composed of three parts. In the first part, we examine the uses of AI in innovation and how entrepreneurs can develop business opportunities that build on recent advances in prediction technology. In the second part, we introduce a process for conducting analytics projects and discuss techniques related to data understanding, data preparation, modeling, and evaluation. These techniques include exploratory data analysis, classification, clustering, text mining, large language models, deep learning, reinforcement learning, and novelty detection. In the third part, we discuss the future and risks of analytics. In the experiential component of the course, you will identify an AI opportunity, and create machine learning models related to classification, large language models, and idea discovery. Instead of using existing analytics tools with predesigned features, students will become familiar with the versatility of the analytics capabilities of Python ML libraries and learn how to build their own AI apps.

# **Class sessions**

Students can participate online by logging into the BigBlueButton on Brightspace. For the audio portion of the conference, you can also call into the conference server using the phone numbers provided on login, or using the built-in VOIP feature (click on the headset icon). A recording of the sessions will be available after class.

For the weekly sessions there will be assigned readings and tasks.

The course material and recordings of the class sessions will be made available on Brightspace.

#### **Student evaluation**

Course participants are required to complete group assignments, individual assignments, and a take home exam. To determine the course grade, the following weights apply:

•	Assignment 1: Canvas of an AI opportunity (group)	15%
•	Assignment 2: Classification for predicting startup success (group)	15%
•	Assignment 3: Large language models for examining startup failure (group)	15%
•	Assignment 4: Discovering novel ideas (group)	15%
•	Lessons (individual, one for each group assignment)	20%
•	Take home exam (individual)	20%

Assignments submitted late and presentations not made will receive a grade of zero. All students in a group receive the same grade. Final grade reports will follow Carleton University guidelines.

#### Assignments (group)

There are four group assignments. Groups should can have 3-4 members.

Assignment 1	Analyze a decision task and identify an opportunity for using AI to solve it. Document the AI opportunity with the AI canvas described in the readings.
Assignment 2	Apply classification to an entrepreneurial problem. Here you will create a classification model that predicts startup success from data on early-stage investments in Crunchbase.
Assignment 3	Large language models offer new opportunities for processing and generating text. Use text embeddings, clustering, and the ChatGPT API to examine the reasons for startup failure.
Assignment 4	Discovering what is new is a critical skill for entrepreneurs. Use an information-theoretic approach to evaluate the novelty of ideas.

Detailed instructions for each assignment will be posted at the beginning of each quarter of the course.

Assignments are due at the end of day noted in the schedule (see below).

# **Lessons (individual)**

These are individual assignments about the group assignments, and take the form of a quiz.

There will be a variety of questions, including multiple-choice questions and questions that expect free-form answers. Questions will be about decisions you made when designing a model (eg, explain how you selected the features for a model) and coding the model (eg, describe how the code in a given section works).

Specification grading will be applied to free-form questions. This means that you either meet the minimum requirements and get the mark for this question or you don't. No partial marks will be awarded.

Lessons are due at the same time as the respective assignments.

#### Take-home exam (individual)

The exam will be a take-home exam.

The exam questions will both cover concepts from the readings and modeling concepts.

Exams are due on Dec 22.

# **Group work and free loaders**

Group work is an important component of this course. You may elect to work in the same group to prepare both assignments or work in two different groups. Group conflicts are to be dealt with by the group in a way that is fair, fast and without personal attacks. The instructor does not settle group disputes.

The instructor will dissolve a group that is late submitting an assignment.

Free loaders are not welcome anywhere. This course is no exception. The best way to deal with free loaders is to not include their names in the first page of the group assignments. If a student's name does not appear in an assignment submitted by his or her group, the student must submit his or her own assignment. Failure to do so, the student will receive zero for the assignment. There is zero tolerance for free loaders.

#### Use of AI tools

AI tools like ChatGPT can be useful in many ways in your day-to-day work as an analytics professional. However, because they can also be abused, you must acknowledge the use of AI tools in any course work you submit.

Here are some guidelines for what not to do when using AI tools in your assignments:

- You should not rely solely on AI tools. It is important that you understand the material and complete assignments on your own. Use AI tools as a supplement, rather than a replacement for your work
- Do not use AI tools to plagiarize (also see the section on plagiarism below). Using AI to generate or modify content to evade plagiarism detection is unethical and violates academic integrity
- You cannot assume that AI responses are correct. AI can generate convincing but incorrect results

Note: These guidelines were adapted from <a href="https://www.cs171.org/2023/syllabus">https://www.cs171.org/2023/syllabus</a>.

#### Special information for pandemic measures

It is important to remember that COVID is still present in Ottawa. The situation can change at any time and the risks of new variants and outbreaks are very real. There are a number of actions you can take to lower your risk and the risk you pose to those around you including being vaccinated, wearing a mask, staying home when you're sick, washing your hands and maintaining proper respiratory and cough etiquette.

**Feeling sick?** Remaining vigilant and not attending work or school when sick or with symptoms is critically important. If you feel ill or exhibit COVID-19 symptoms do not come to class or campus. If you feel ill or exhibit symptoms while on campus or in class, please leave campus immediately. In all situations, you must follow Carleton's symptom reporting protocols.

**Masks:** Carleton has paused the COVID-19 Mask Policy, but continues to strongly recommend masking when indoors, particularly if physical distancing cannot be maintained. It may become necessary to quickly reinstate the mask requirement if pandemic circumstances were to change.

#### Students with disabilities

Students with disabilities who require academic accommodations in this course are encouraged to contact the Paul Menton Centre (PMC) for Students with Disabilities to complete the necessary forms. After registering with the PMC, make an appointment with me in order to discuss your needs at least two weeks before the first assignment is due. This will allow for sufficient time to process your request

# Plagiarism

Plagiarism (copying and handing in for credit someone else's work) is a serious instructional offence that will not be tolerated. Please refer to the section on instructional offences in the Graduate Calendar for additional information. Plagiarism is against the TIM culture. A case of plagiarism will be referred to the Director of the TIM program and the Carleton University Ethics Committee. The instructor will not deal with the matter directly. The university has clear processes to deal with students who are suspected of plagiarism.

# Administrative details

These are the rules of conduct for this course:

- Please notify the instructor via e-mail, if you will not attend a class.
- You must be prepared for each class. You do so by reading the material assigned and being prepared to discuss in class how what was read can be applied in product development organizations.
- We will use Brightspace to share files and upload assignments unless noted otherwise.
- You need to sign up for Slack. Course announcements will made on Slack. Course discussions will take place on Slack. Don't send me an email if you have a question, but use Slack.
- Each presenter must make his/her slides available to all other students by **3pm** on the day of the class.
