## 2) STUDIES AND RESEARCH (Some of this work is online at [www.carleton.ca/winer](http://www.carleton.ca/winer))

### Ongoing research

***The integration of public finance and collective choice:*** A longstanding research program that combines the traditional concerns of public finance with the analysis of collective choice mechanisms and explores the implications of the resulting frameworks for the positive and normative analysis of taxation, public expenditure and public policy generally. A recent addition is a monograph on *Political Competition and the Study of Public Economics* in the Cambridge *Elements* series, October 2022.

***Political competition in mature democracies: meaning, measurement and consequences:*** This research is concerned with the meaning, measurement, and consequences for public policy of variation in the degree of political competition in mature democracies. Applications include elections to the parliament of Canada and their consequences over the history of the modern state from 1867, elections for the United States Senate from 1922, and the measurement and consequences of competitiveness in elections at the state level in India.
